

Notes

1. For ROI – must contain 1/2 to 2/3 area of the lesion.
Use average HU (not min or max)
2. Washout = (avg peak contrast – delay)/ avg peak contrast
 1. Peak contrast is 70 sec
 2. Delay is 15 min post injection
3. MR – If no IV access, younger patient, contraindication to IV contrast
4. PET/CT Only appropriate in follow-up known malignancy
